

# Website Project Brief

## Gym

You have been tasked with building a 3-page website for a gym using only HTML and CSS.

---

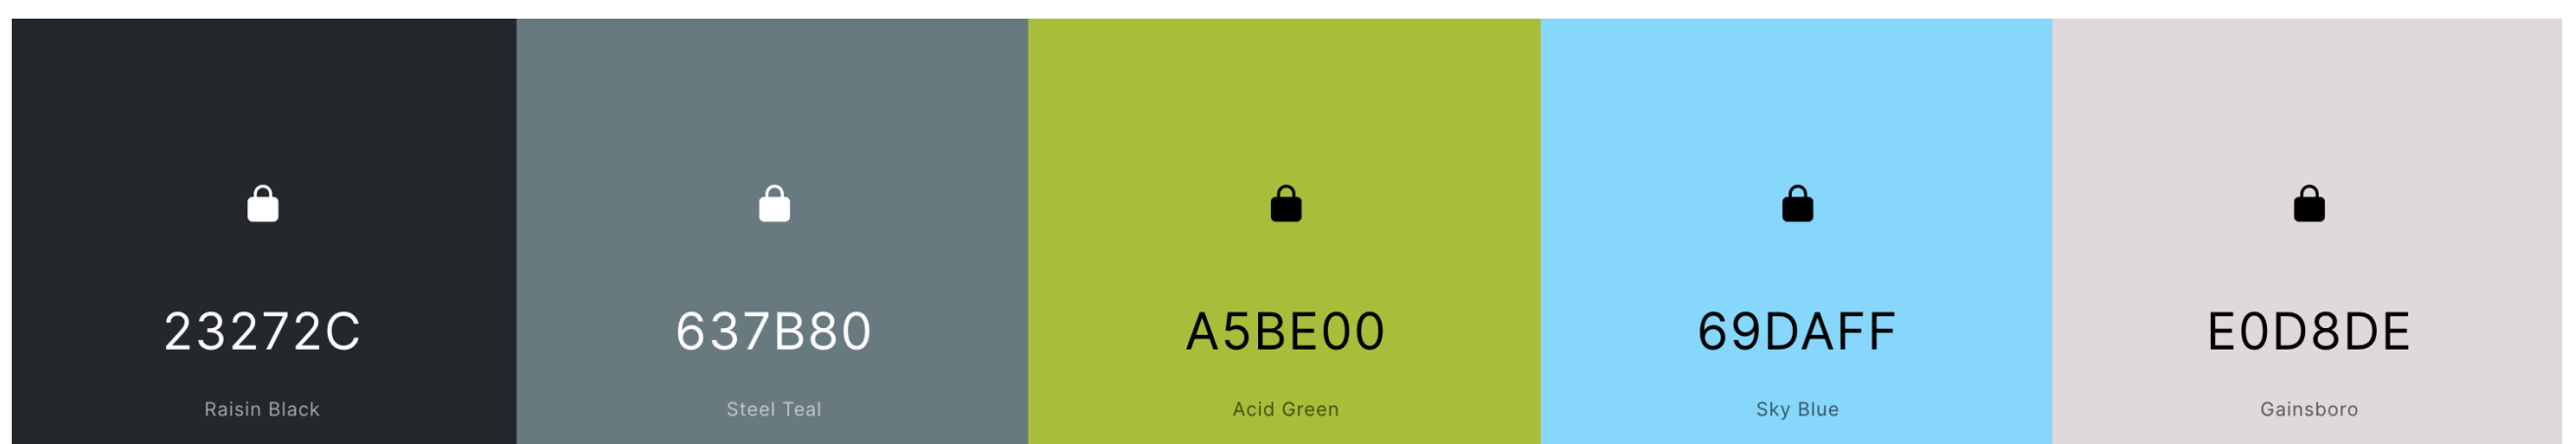

Home page: Introduce the gym

Second page: The training packages

Third page: Healthy recipes

---

## Colours

White can also be used.

## Images

Click the links below, download the images and add them into your website folder to be able to use them.

# Wireframes

Wireframes are used to show the structure of a website.

Images are represented as grey boxes with an "X" through them.

You will have to decide the wording that will replace the lorem ipsum, where colours will go and what font to use.

# Wireframes

[ Brand Name ]      Packages    Recipes

← The brand name will link back to the index page.  
The other links must link back to their designated pages.

## Training Packages

## Stretch goals

Stretch goals are extra activities that can be done if the base activities are completed first.

They are completely optional and are meant to stretch your knowledge and application of that knowledge.

- ☐ Index page: Add a section showing the location of your business
- ☐ Index page: Add a section showing **quotes** / reviews from customers
- ☐ About page: Add an extra page to your website where you will add a **table** detailing the opening and closing hours for the business
- ☐ Contact page: Add an extra page to your website where you will add a **form**. This form will not be functional and is meant to mimic a contact form.

- ☐ Responsivity: Use **media queries** to make your website functional for desktop, tablet and mobile

Any additional pages **must** be added to the navbar which features on all pages. Regardless of the page the user is on, they **must be able to navigate to all other pages** on your website.
